

## Block Bond - Chemical Hardeners

Our Block Bond concrete chemical hardener additives accelerate curing times and dramatically increase concrete compressive strength. Ideal for high speed brick/tile factories.

### Key Features

- > Reduces water demand in the concrete mix by 10-15%, leading to higher structural density.
- > Accelerates setting time — demould tiles in 14-18 hours instead of 24-36 hours.
- > Increases concrete compressive strength by 20-30% at all ages.

### Application Guide

Add 250ml to 400ml of hardener per 50kg bag of cement. Dilute the hardener in the mixing water before adding it to the concrete mixer.

### Complete Product Gallery

#### Block Bond Can Pack

5 Litre Can | Small Site

Convenient 5-litre packaging. Great for smaller sites and batch trials.

#### Block Bond Jerry Can

20 Litre Can | Commercial Standard

Heavy-duty 20-litre container. Industry standard for medium size units.

#### Block Bond Bulk Barrel

250 Kg Drum | Industrial Drum

250 Kg heavy steel drum for large scale commercial factories.
